Imagineer Systems Releases monet v2, mokey v4

--Major productivity enhancements through toolset extensions and new user interface--

11th April 2006 - Imagineer Systems, the UK-based developer of the innovative **mokey**, **monet** and **mofex** visual effects tools, announced today the immediate availability of **monet** v2 and **mokey** v4. **monet** is a unique tracking and compositing toolset for commercial, film and corporate video post production work such as virtual product placement and visual effects work. **mokey** offers an essential toolset for removing wires, rigs, logos, scratches and other undesired elements in commercial, film and corporate video post production work. Both products will be on display in Las Vegas at NAB 2006 booth number SL5564.

monet v2 further enhances the original feature-set, adding a host of new tools and optimisations that increase its already impressive performance. New features include: a stabilize tool, a mesh warper, improved rotoscoping tools, support for exporting projects to Shake via the **mofex** plug-ins, enhanced file I/O performance and optimised processing, persistent caching and a streamlined user interface.

mokey v4 represents a major upgrade in terms of feature set, workflow and user interface. Improvements to the rotoscoping toolset have resulted in better handling of edges when removing objects in multi-layered scenes and new tools like Patch give users more flexibility when dealing with complex shots. Performance improvements and a new hierarchical workflow approach have improved the usability of the tool significantly.

“We have worked long and hard on implementing feedback from a rapidly expanding user base,” comments Allan Jaenicke, CEO, Imagineer Systems. “The comments from beta users have been excellent and we are very excited about the new releases. We are continuing to innovate and deliver high quality solutions that give artists ever more creative freedom.”

Availability and Cost

monet v2 is available immediately through authorised partners. Prices start at US\$16,000.

mokey v4 is available immediately through authorised partners. Prices start at US\$9,000.

About Imagineer Systems

Imagineer Systems Ltd focuses on research, development and marketing of productivity enhancing visual effects solutions for film, video and broadcast post production. The company was founded in 2000 and is based in Guildford, United Kingdom.

monet[™] is a unique tracking and compositing toolset for commercial, film and corporate video post production work. Based on Imagineer's unique 2.5D planar tracking and shadow/highlight extraction technology it offers a cost effective, standalone solution for performing virtual product placement and complements traditional post production pipelines by delivering the highest quality 2D tracking data and graphical elements for finishing in other compositing and editing systems.

mokey[™] offers an essential toolset for removing wires, rigs, logos, scratches, hairs and other undesired elements in commercial, film and corporate video post production work. Based on Imagineer's unique 2.5D planar tracking and background reconstruction technology it seamlessly removes elements and provides an excellent alternative to the painstaking, manual process of painting or cloning.

mofex[™] is a unique set of plug-ins for Apple's Shake compositing software for manipulating elements being composited, supporting application of lens distortion, calculation and application of shadows and highlights, application of tracking marker filters, adaptive anti-aliasing filtering, warping, temporal median filtering and more.
